Step 1

Remove old rubber element by squeezing and withdrawing from the blade assembly.

Step 2

Insert the new wiper refill into all blade claws and ensure refill is firmly locked into moulded recess at end claw. Discard plastic rail retaining clips as metal rails are retained in end claws.

Warning: Check that all claws are engaged under the refill rails. Failure to engage all claws may result in windscreen damage.

Step 3

Snap off the stainless steel rail strips with pliers by bending up and down scored rails at a minimum of 25mm from end of the blade claws. Score marks are at 25mm increments.

Important: Ensure metal rails are located in the moulded rubber section at the retaining end prior to scrapping the stainless steel strips.

Step 4

Cut rubber squeegee at a minimum of 10mm past the end of the metal rail strips.

Refill Installation Tips

1. Refer to Vehicle Application Listing for correct replacement refill. This list has been compiled for refill replacement in vehicle manufacturer's original blade. Replacement refills could differ if alternate blades have been installed.
2. Check claws for damage prior to installation. Replace complete blade if necessary.
3. Check wear in the blade structure and connector/adaptor prior to installing a replacement refill. Replace complete blade if signs of wear are present.
4. Do not cut refills too short. Refills should extend 25mm past the end claw. Metal rail refills rubber should extend 10mm past the rails.
5. When installing metal rail refills ensure that the end claw is engaged in the moulded rubber recess location.
6. Care should be taken when replacing refills in plastic blades due to restricted access.

- The moulded rubber profile is unique to Tridon CurveBlade™ design and must be used with the correct OE stainless curved rails. Refer to Tridon vehicle application listing for the correct replacement rubber refill.

Remove curved metal rails from original refill and fit to new Tridon rubber refill. **NOTE:** Metal rails are curved and have offset locating lugs to ensure correct positioning in the refill. Ensure that the metal rails are positioned correctly before installation into the blade assembly.

Step 3
Insert the new wiper refill into all the blade claws, ensure that the refill is firmly locked into the moulded recess at the end claw. **Warning:** Check that all claws are engaged under the refill rails. Failure to engage all claws may result in windscreen damage.

Step 4
If required, cut the refill rubber at a minimum of 10mm past the end of the curved metal rail strips.

Step 1

Remove old rubber element by squeezing and withdrawing from the blade assembly.

Step 2

Insert the new wiper refill into all blade claws and firmly lock the metal retaining clip in the end claw.

Warning: Check that all claws are engaged in the plastic backing. Failure to engage all claws may result in windscreen damage.

Step 3

Holding blade firmly snap the refill backing to the required length allowing a minimum of 25mm from end claw.

Step 4

Cut rubber squeegee flush to backing length.

Refill Installation Tips

1. Refer to Vehicle Application Listing for correct replacement refill. This list has been compiled for refill replacement in vehicle manufacturer's original blade. Replacement refills could differ if alternate blades have been installed.
2. Check claws for damage prior to installation. Replace complete blade if necessary.
3. Check wear in the blade structure and connector/adaptor prior to installing a replacement refill. Replace complete blade if signs of wear are present.
4. Do not cut refills too short. Refills should extend 25mm past the end claw. On plastic back refills the rubber should be cut to the same length as the backing.
5. Care should be taken when replacing refills in plastic blades due to restricted access.

Heavy Duty Truck & Bus Wiper Refills
